The incident was reported about 1:20 a.m. at the Walgreens on Sycamore Place in Sharonville. The manager said the man was shoplifting from the pharmacy, which is located across the street from the Walgreens. When police arrived, the man was dead. The manager of the Walgreens said they have video of the incident. The manager did not want to give his name. He did say the man was leaving with more than one carton of cigarettes. "I was shocked. I didn't think it was going to get anywhere, I thought it was going to end there," the manager said. The manager didn't think the man was actually stealing anything and said he was helping his friend. "I was trying to keep him from leaving. I mean I was helping him just to be honest," the manager said. Police will investigate the case as a possible homicide. They have not confirmed anything about the incident.[Osteoporosis: diagnostic and therapeutic management]. Osteoporosis is a common, chronic, multifactorial disease characterized by a reduction in the volume of bone mass, structural deterioration and decreased bone strength, leading to an increase in the incidence of fractures of the bones. Osteoporosis occurs in the aging population and women are considered to be at a higher risk. In Spain, osteoporosis is not listed as a priority public health issue, but the diagnosis is made mostly in secondary care, and the proportion of patients with osteoporosis diagnosed in primary care is not greater than 10%. Osteoporosis is now considered to be a disease which can be diagnosed and treated. Although clinical practice guidelines are available on how to treat osteoporosis, different approaches to diagnose
