The first thing you're going to want to do is to get out of the habit of doing everything in Photoshop. If it's a Photoshop workflow, it's a bad workflow. And just because you're using Photoshop, it doesn't mean you can't use other software. In fact, by spending some time in the right versions of other graphics programs will not only make your job better, but will also help you make better decisions. For example, if you're working in Photoshop and you find yourself wanting to continue working in After Effects, it's not always an easy switch — but it's do-able, and even a better way to get the job done. •**Create vector graphics:** There are two types of vector graphics in Photoshop: Scalable Vector Graphics (SVG) and Illustrator files. Photoshop adds a different dimension to the images. It is intuitive and simple to use, and its leading layers make it quick to create designs that are scalable and easy to edit. The general design of the interface and dialog boxes are simply no longer state of the art. So let's say you're an experienced graphic designer or illustrator, and you find yourself using Photoshop as your primary graphics program. You likely did this because you are familiar with the tools, and many of your friends and colleagues use it. Even so, you may be out of step with the design trends, and probably find yourself continually fighting the program. But, if you're relatively experienced with Photoshop as a non-graphics type of program, you can benefit from a simple fact: your problem, most likely, isn't Photoshop. It is you. e3d0a04c9c
